

How to log into Webmail?

Webmail is a great feature offered by cPanel. You can access email from any PC connected to the Internet. There are two ways to log into the default webmail supplied with cPanel. Type the following information into the browser.

If the domain name has propagated type:
<http://www.yourdomainname.com/webmail>

You can also access it by going through the default webmail port number of 2095 as in the following example.

If the domain has propagated type:
<http://www.yourdomainname.com:2095>

Once you go to the address above, you will be prompted for your user name and password. All email account user names look just like the email address.

In the user name section, type your full e-mail address. (Example: you@yoursite.com)
In the password section, provide the password which you get from us when you created the email account. Then hit enter.

You are now logged into webmail.

Once you have logged into webmail, click on the webmail program of your choice:

You are logged in as [info@hostpaharaoh.com](#)

Read Mail Using Horde

Configure Mail Client

BoxTrapper

Email Delivery Route

Email Filtering

- **Horde**
- **SquirrelMail**
- **RoundCube**

We offer you a choice in webmail programs. You can pick whichever one you are most familiar with, or the one you learn to like over time.

You can switch webmail programs as much as you like, and you will still see all your emails.

Horde is a popular choice, but does require some configuration to make it behave the way users expect. (For instance, Horde does not use a trash can for your deleted emails.)

SquirrelMail is highly recommended as the webmail program you should use. This software behaves the way users expect. (For example, it sends deleted mail to a trash folder.) Also, Squirrel Mail has low amounts of graphics, which means faster page loads. We also find that SquirrelMail is more reliable. If your other webmail programs are not working, try SquirrelMail.

RoundCube is another popular choice. Again, just pick the program you like.

Don't forget, you can change webmail programs anytime, and you will still see the same emails

Sincerely,

Hostpaharaoh
